

Functional Requirements

Onboarding & Setup

- Welcome screen + returning user login
- Shop setup: business name, email, type, currency, optional location
- login: which makes use of shop name and shop email
- "How do you record today?" selector (Notebook/Receipts/Spreadsheet/Other) to tailor onboarding
- Scan explainer (3-step: photo → AI reads → user confirms)
- Camera permission request with fallback ("Not now")

Scanning & Digitization

- Capture a photo of a record page directly via camera
- Upload a record photo from the phone gallery (alternative to live capture)

- View list of previous scans with status (e.g., "Saved", "needs review") and record count per scan
- AI/OCR extraction of dates, products, quantities, prices
- Mandatory user review/confirmation before data is committed as a business record
- Guidance/tips shown during scanning (e.g., "place page on flat surface")

Records Management

- Records list view, filterable by Today / This week / This month / Needs review
- Each record shows: product initials/icon, name, quantity, timestamp, amount, and source tag (*Scanned vs Manual*)
- Grouping of records by date (Today, Yesterday,)
- Manual record entry
- Flagging of records that need review/

verification

Product & Inventory Management

- Product catalog/list with SKU, unit price, and stock quantity
- Add new product (+ button)
- Stock status per product: In stock / Low stock / Out of stock
- Filter products by category and stock status (All, Low stock, Out of stock, Drinks, Groceries, etc.)
- Aggregate inventory stats: total products, total stock value, count of low-stock and out-of-stock items

Dashboard / Home

- Daily sales summary with day-over-day % change
- Transaction count for the day
- Estimated profit, units sold, low-stock count as summary cards

- Quick actions: Scan records, View as Excel
- "Needs your attention" alerts (low stock, out of stock)

Analytics

- Date-range filters: Today / 7 days / 30 days / Custom
- Key metrics: total sales, number of sales, average transaction value, estimated profit
- Weekly sales chart (by day of week)
- Best-selling products list with units sold, revenue, and trend indicator
- Slow-moving products list with sales velocity and trend indicator
- Option to choose what product you want to be analysed based on similar metrics

Navigation

- Persistent bottom nav: Home, Records, Scan (central action), Products, Analytics

Settings

- Language selection, Business info, Dark mode, Terms & policies

Data Export

- Export/view records as Excel

Non-Functional Requirements

***Usability*:** Guided onboarding, minimal-text simple UI, large touch targets, tag-based filters for quick scanning of information, designed for non-technical small shop owners

***Accuracy/data integrity*:** OCR results must be human-verified before being treated as official records "needs review" state prevents silent errors entering the

system

Performance: Scan-to-data turnaround should feel near-instant; analytics/dashboards must load quickly given growing transaction volume

Data privacy & security: Camera access only on demand; photos stay local until backed up

Offline tolerance: Local photo storage implies the app should function (at least partially) without constant connectivity

Localization: Multi-language support(french/english), local currency (FCFA) formatting

Scalability: Must handle large product catalogs (150+) and inventory values (3M+

FCFA) without degrading performance

***Consistency*:** Uniform visual language (color coding — green for in-stock/scanned, orange/red for low/out-of-stock, blue for manual) across all modules

***Interoperability*:** Export to Excel for use outside the app

***Reliability*:** Clear status indicators (Saved, Needs review) so users always know the state of their data
